

# Dashboard

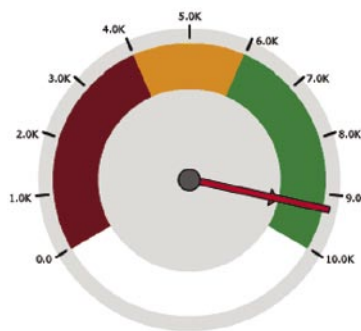

## Overview

Dashboard is a real-time management information console which communicates key business activities, such as targets, performance levels, movement and trends, in a clear graphical format. Drawing information from a single or multiple data sources, it can be used to monitor goals from a corporate level right down to the individual. Dashboard provides a framework for management and collaboration, encouraging focus on business objectives and empowering end users to take immediate action where required.

Dashboard is an out of the box, fully web-based application that is flexible to deploy and simple and intuitive to use. It has been designed to easily access data from a wide variety of sources, including SQL, Oracle and Access. Unlike many other MIS applications, it requires minimal implementation and intervention on our part, keeping the time and cost of implementation low.

## Key business benefits

- Analyse Key Performance Indicators (KPI) – identify movements and trends to be analysed and acted upon promptly.
- Collaborate with colleagues – when changes occur, notify a colleague to either take action or to perform further analysis.
- Review performance against corporate targets – access key information quickly rather than waiting for data to be collated from disparate sources.

Set and review targets against KPI's using speedometers

Name	Trend	Actual	
% 0 - 30	▼ - 0.8	● 3.8	✓
% 30 - 60	▲ 0.6	● 1.7	✓
% 60 - 90	▼ - 0.9	● 1.1	✓
% 90 +	▼ - 0.3	● 0.7	✓

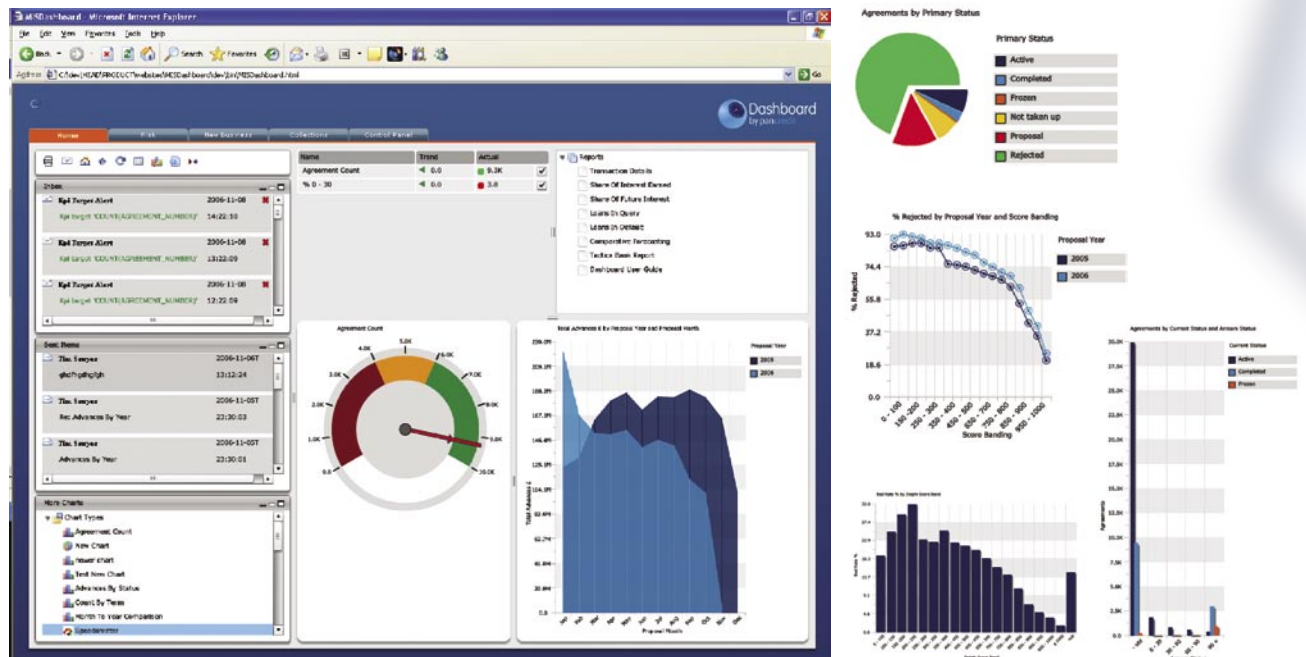

KPI's reviewed at a glance. Quickly understand value and movement.

# Dashboard

## Other benefits

- Track KPI movement, direction and velocity, i.e. is performance improving or declining and how quickly is this changing.
- A highly graphical and intuitive interface that can be deployed through a web browser.
- Users can define their own view of the data, and show metrics important to themselves.
- Device independent – can run in any web browser (requires Macromedia Flash Player).
- Drill-down views allow users to discover reasons behind performance.
- Extract data to other applications such as spreadsheet or graphic formats.
- User views and data access can be restricted by user ID.
- Collaboration – just one click to email charts and KPI details.

## Home page

The home page is customisable by or for each user, including the key watched chart or charts and KPI monitors.
